
Software Engineering Final

By: Alex, Jason, Kevin, Logan, Emma

Project Overview

Purpose : An simple all-in-one app for college students daily life

- Includes events, finances/debts, Campus Map, and schedule
- Allow students to post events or register for events and view them on the calendar
- Allow students to find on campus buildings/rooms
- Search for textbooks or Sell textbooks

Problem we are addressing: Not an off the shelf software but a personalized app

College students have to download multiple apps for navigating their life. Workday is a solution for mass organizations and touches on this slightly but doesn't niche down for college students specifically. Our app will strip away most of the administrative tools that college don't use daily and simplify it for students needs all in one app, such as: Events, A campus map, a schedule and a way to see all their finances.

Budget

PLAID:

- **One-time fee products:** You'll incur a charge only once per connected account, regardless of the number of API calls made.
- **Subscription products:** These incur a monthly fee for each connected account.
- **Per-request products:** These have a flat fee for every successful API call.

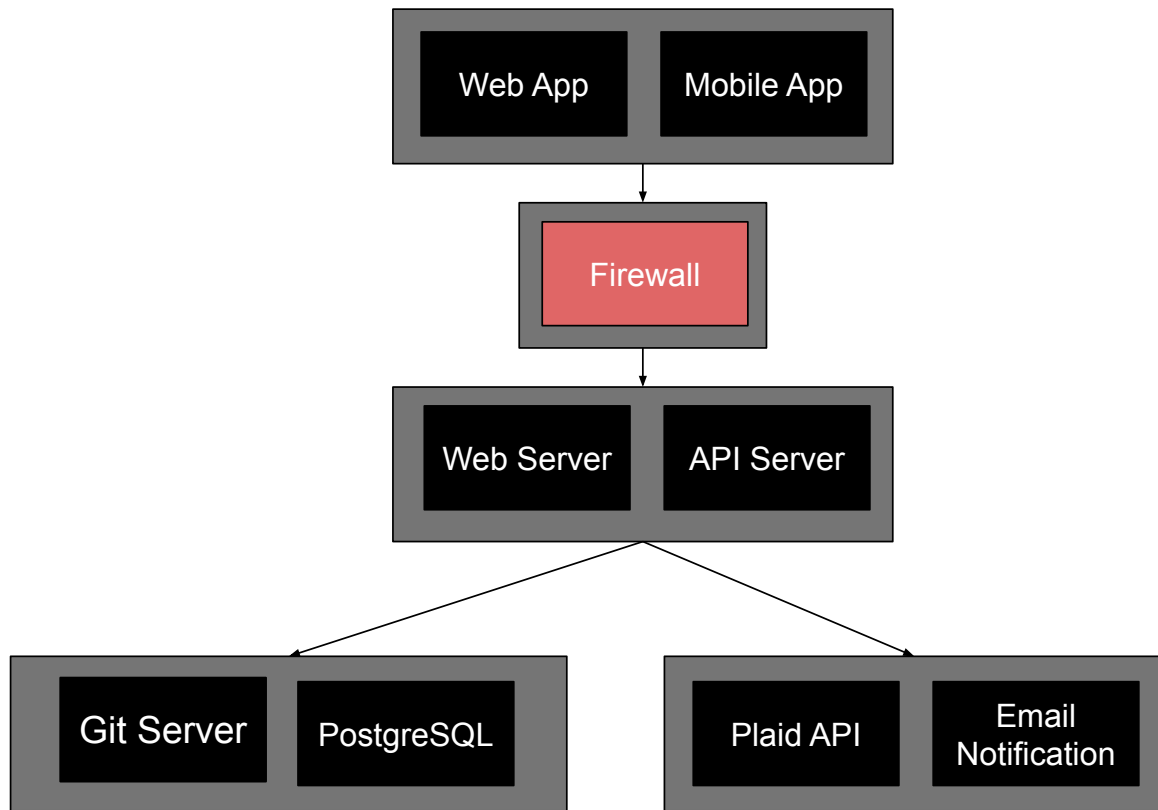

Estimated Cost

- Development cost \$0
- Hosting service \$50/month
- Database hosting \$0-25/month
- Domain name \$10-15/year

Licensing

- Plaid API
 - GitHub (versions)
-

System Architecture

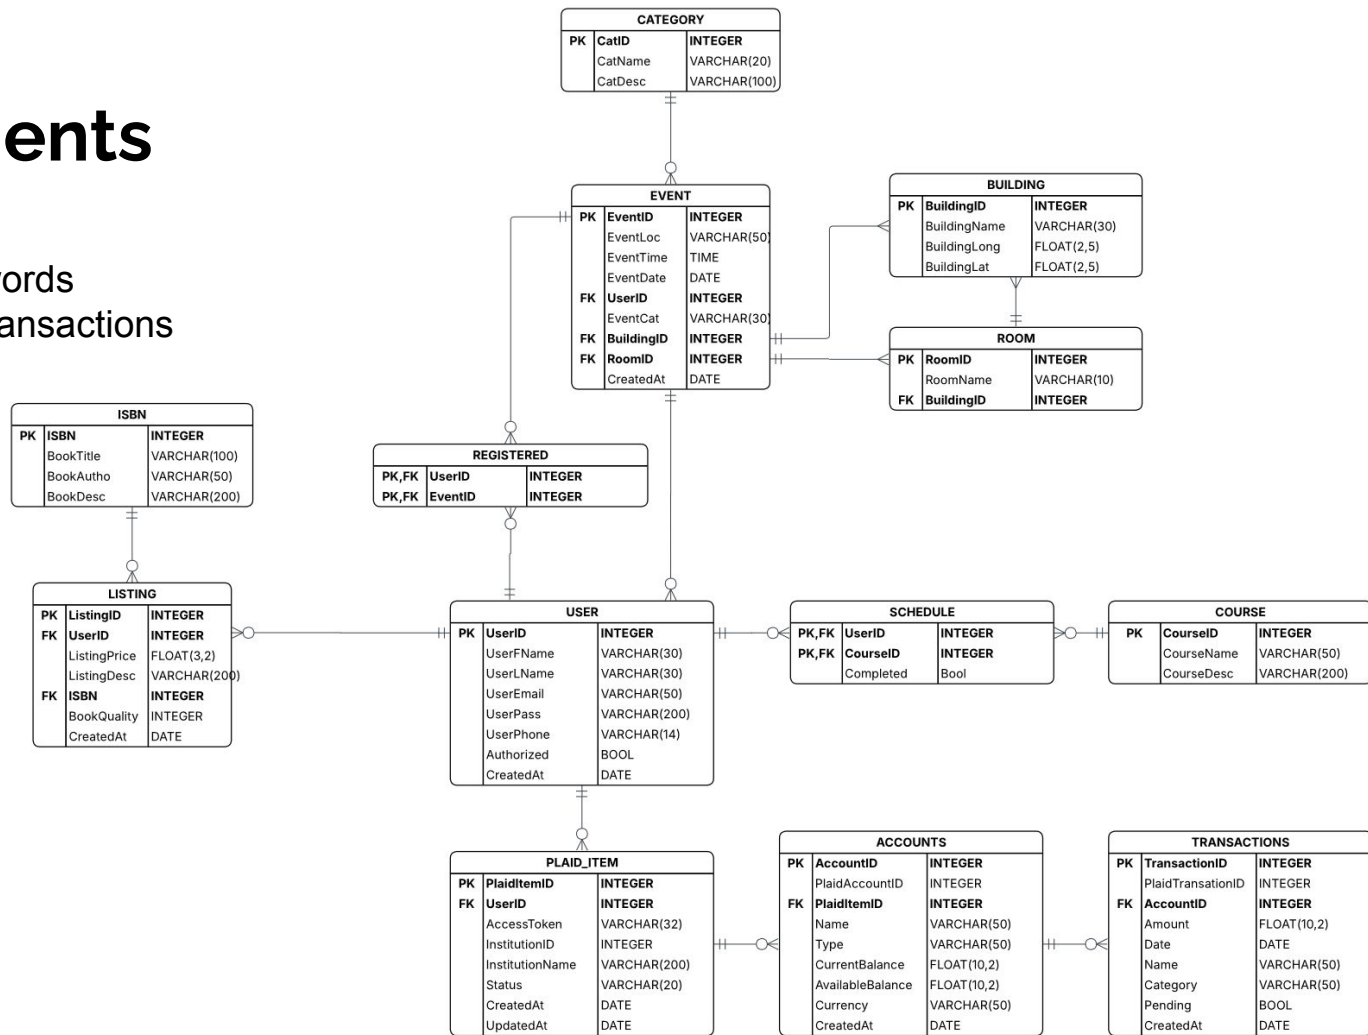

Data Requirements

Encrypted At Rest:

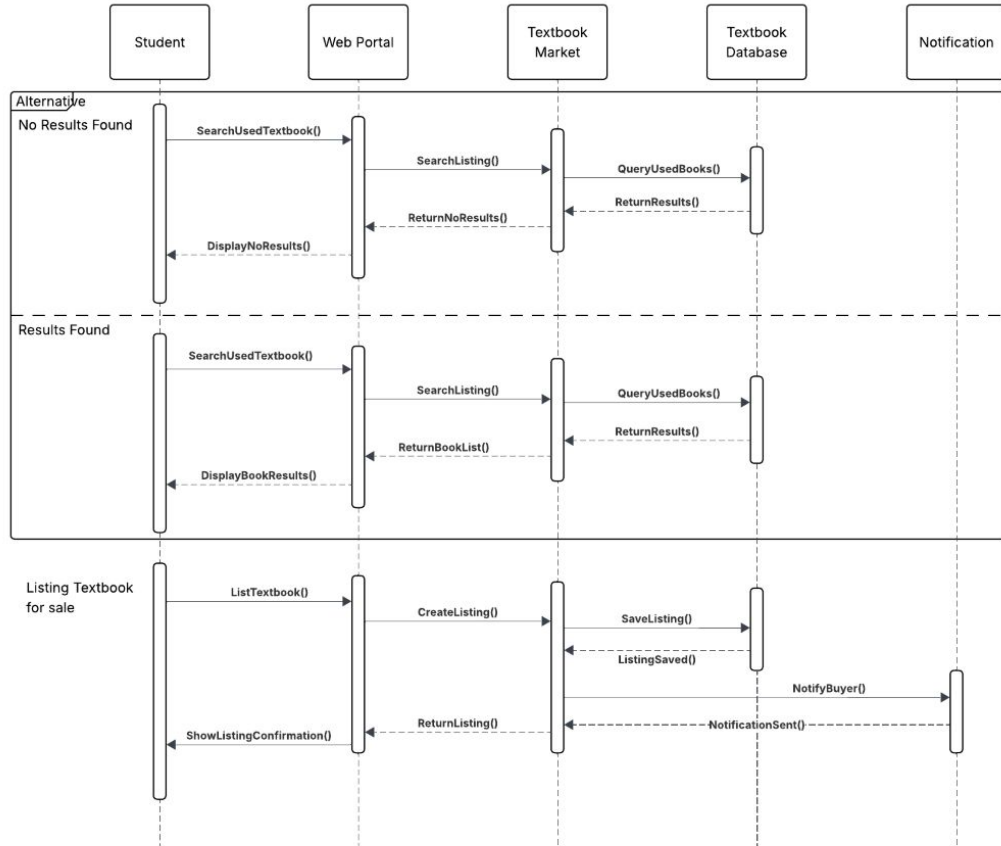

Username, Email, Passwords

Plaid Items, Accounts, Transactions
